

Muhammad Sameed Ansari

Senior Application Developer & Full-Stack Engineer

Islamabad, Pakistan +92-315-5112519 sameedanxari@gmail.com linkedin.com/in/sameedansari

PROFESSIONAL SUMMARY

Results-driven Senior Application Developer with 4+ years of hands-on experience delivering production-grade, cross-platform digital solutions for enterprise clients across mobile, web, cloud, and serverless platforms. Proven expertise in full-stack development, RESTful API design, enterprise platform integration, RBAC-based admin dashboards, and analytics-driven reporting. Adept at working across any software platform or technology domain by combining deep engineering fundamentals with modern AI development tools — enabling rapid onboarding onto ERP platforms, enterprise portals, and complex integration layers without sacrificing quality or velocity.

TECHNICAL SKILLS

Mobile Development:	Swift, SwiftUI, UIKit, Kotlin, Jetpack Compose, Flutter (Dart), React Native	Backend & Cloud:	Node.js, Express.js, Firebase Cloud Functions, MongoDB, Firestore, AWS CloudFront
Web Development:	Angular 21 (TypeScript), React 18, Tailwind CSS	API Integration:	RESTful APIs, Alamofire, Chopper, URLSession, Stripe, Firebase APIs, FCM/APNs
Auth & Security:	JWT, OAuth 2.0, Firebase Auth, 2FA/TOTP, RBAC, Firestore Security Rules	Analytics:	Firebase Analytics, operational dashboards
Architecture:	MVVM, MVC+C, Clean Architecture, Serverless, Offline-First, State Machines	AI & Automation:	OpenAI API (GPT-4o), Groq API (LLaMA), GitHub Copilot, AI-assisted development
DevOps & Tools:	Git, GitHub, Bitbucket, CocoaPods, Gradle, Xcode, Android Studio, Agile/Scrum	Languages:	Swift, Kotlin, Dart, TypeScript, JavaScript, Python, Java, Go

PROFESSIONAL EXPERIENCE

Senior Application Developer

May 2023 — Present

Creatrixe Solution Limited — Canada (Remote)

- Architected and delivered cross-platform mobile, web, and backend applications for enterprise clients across field services, logistics, professional services, and healthcare sectors.
- Designed and implemented typed RESTful API integration layers (Alamofire, Chopper, URLSession) across iOS, Android, and Flutter — ensuring robust, maintainable, and testable network layers.
- Integrated enterprise authentication platforms including Firebase Auth, OAuth 2.0, and JWT with secure token refresh flows and protected API access across all app modules.
- Built admin dashboards with Role-Based Access Control (RBAC), real-time analytics, and operational reporting interfaces for enterprise oversight.
- Applied AI development tools (GitHub Copilot, OpenAI, Groq) to accelerate delivery across multiple technology stacks and rapidly adapt to new platforms and business domains.
- Conducted code reviews, enforced coding standards, and mentored junior developers on API integration patterns and application architecture best practices.
- Coordinated with backend/infrastructure teams, vendors, and stakeholders to validate requirements and ensure seamless system integration across the full delivery lifecycle.

Junior iOS Developer

February 2022 — April 2023

Sofit — Islamabad, Pakistan

- Joined as an intern and was promoted to Junior iOS Developer within a startup specializing in mobile and web applications across diverse industries.
- Developed iOS applications from concept to production — converting Figma designs into live, fully integrated apps using Swift, SwiftUI, and UIKit.
- Built **ShopDev**, an iPad app for developer hiring, featuring search, developer profiles, and Firebase real-time data synchronization.
- Delivered **Nurse Management System** (SwiftUI) with shift scheduling, RESTful API integration, real-time push notifications, and personalized shift recommendations.
- Collaborated closely with back-end teams to ensure API compatibility and data contract alignment across mobile layers.

KEY PROJECTS

Steamatic — Enterprise iOS Field Service Management Platform

Production-grade native iOS app for enterprise field service operations

- Implemented enterprise-grade token-based authentication with secure session handling, token refresh flows, and protected API access across all app modules.
- Built a custom Alamofire-based REST API integration layer (Endpoint<T> abstraction) providing typed, testable, and maintainable API contracts across all modules.
- Delivered drag-and-drop scheduling with live API sync for real-time dispatcher-to-field-crew coordination; integrated MapKit job tracking and offline-first data persistence via RealmSwift.
- Integrated advanced features: QR code scanning, e-signature capture, SMS/email dispatch, Firebase Crashlytics, and Mixpanel for operational monitoring and behavioural analytics.

Stack: Swift 5, UIKit, RxSwift/RxCocoa, Alamofire, RealmSwift, Firebase Crashlytics, Mixpanel, MapKit

B12Give — Multi-Platform Donation & Logistics Management System

Full-stack food rescue and donation logistics platform connecting retailers, drivers, and shelters

- Built an Angular 21 admin dashboard with three-tier RBAC (Super Admin, City Mayor, Retailer), real-time Chart.js impact analytics, paginated data management, and CSV export.
- Implemented a Node.js/Express REST API with JWT authentication, role-based middleware, MongoDB Change Streams for real-time push notifications, and scheduled automation jobs.
- Integrated multi-platform push notification delivery (FCM for Android/Flutter, APNs for iOS) from a unified notification service layer.
- Developed a Flutter hybrid app with Chopper-based API client, flutter_secure_storage JWT persistence, and API versioning interceptor; integrated AWS CloudFront signed URLs and Google Places API.

Stack: Angular 21, Node.js/Express, MongoDB, Flutter (Dart), Kotlin, Firebase (FCM/Crashlytics), JWT, AWS CloudFront, Google Places API

TutorsHub — Full-Stack On-Demand Tutoring Marketplace

End-to-end production marketplace for student–tutor discovery, booking, and payments

- Integrated Stripe API for checkout session management, payment confirmation, and Stripe Connect-based tutor payout monitoring via a React 18 + TypeScript admin portal.
- Implemented Firebase Cloud Functions serverless backend with atomic slot locking (preventing double-booking race conditions), OTP-based session verification, and scheduled reminders.
- Designed an 8-state booking Finite State Machine with server-enforced transitions and Firestore Security Rules restricting sensitive writes to Cloud Functions only.
- Integrated real-time in-app notification inbox with FCM-powered push delivery and deep-link routing.

Stack: Flutter (Dart), React 18 (TypeScript), Tailwind CSS, Firebase Cloud Functions, Firestore, Stripe API, FCM

WriteAI — iOS AI Keyboard Extension (Personal Project)

Native iOS app with a fully custom AI-powered keyboard extension for in-context text rewriting and translation

- Integrated OpenAI Chat Completions API (GPT-4o-mini) and Groq API (LLaMA 3.3) as dual AI backends with live connectivity testing.
- Built a complete custom QWERTY keyboard extension in SwiftUI, bridged via UIInputViewController; implemented iOS Keychain Services with shared App Group access for secure cross-process API key storage.

Stack: Swift 5.10, SwiftUI, UIKit, URLSession, Keychain Services, App Groups, OpenAI API, Groq API

EDUCATION

Bachelor of Science — Computer Science

August 2018 — June 2022

FAST National University of Computer and Emerging Sciences, Islamabad

Final Year Project: Blockchain-based mobile application enabling organizations to create internal cryptocurrency for cashless transactions — smart contracts in Go; cross-platform frontend in React Native.
